

BARREL ROTATION ALARM RA-5

STOP PLATING BARREL ROTATION FAILURES with a loud alarm and flashing LED.

Plating barrels can stop rotating for a variety of reasons, mechanical or electrical, and when they do, it means costly scrap or time-consuming rework. If an alarm sounds in time, you can eliminate this problem. Introducing the RA-5 rotation alarm that does just that!

At the heart of the system is a timer that detects when a magnet (attached to the plating barrels) sweeps past a detecting probe. If the magnet isn't

- Loud alarm is proven in plating environments.
- Waterproof. Suitable for wash down duty.
- Inductive proximity sensor with long 30mm range included.
- Long range rubber-encapsulated magnet included.
- Mounting brackets included to make installation easy. (video [here](#))
- Simple installation, printed, video, or phone. Printed instruction link [here](#).

Stop rotation failures for good!
