

LEVEL GAGE WITH ALARM

Digital display of tank level with bar indicator and numerical display.

The digital display is connected to a submersible sensor made from PTFE which is compatible with almost any chemical - including sludges. The sensor responds to changing pressure from the liquid to produce a reading $\pm 0.5\%$.

There are four independent alarm points that can be configured any way you wish. Also outputs for further alarming so it can send email and text messages.

The installation consists of simply dropping the sensor to the bottom of your tank, and plug in the digital display. (we have already set the units from the factory so there is not calibrating)

OTHER FEATURES

- 4 independent alarms
- Compatible with almost any chemical.
- Easy installation - just drop the sensor to the bottom of your tank.
- Displays tank volume in any units - inches, gallons etc.
- Works where Ultrasonic sensor won't. (turbulence, foams, debris)

*Many more functions described on our webpage below.
Included video.*
