

LEVEL CONTROLLER LC3

Controls liquid level automatically.

The LC-3 Level Controller will control the liquid level in a tank by activating a solenoid valve or pump, to automatically maintain the liquid level in a tank. A third float provides a built-in emergency alarm for over or under filling.

Very easy to install, just bolt to the rim of a tank. Alternatively, there are screw-in mounting options available. (pictured)

Once mounted, adjusting the level is done by loosening the thumbscrews and sliding the pipes to the desired depth. Then, simply plug in your device to the dangling receptacle, and that's all there is to it. No tools needed.

- Designed for corrosive and wet environments - waterproof.
- Very loud warbling buzzer will be heard over loud factory noise.
- Overfill alarm and tank empty alarms included.
- 15A relay load.
- Can be set to pump-up or pump-down.
- Circuit board logic can be changed in the field. For example, switch from tank-filling to tank-emptying.
- Float guards protect floats from damage, and can be removed for inspection of floats..
- Polypropylene, PVDF, or stainless steel.
- Many options like text messaging or wireless communication available.
- Capacitance sensor available. (model LC3-KC)
