

LOW PROFILE OVERFILL ALARM

Tank overflows are a constant headache in plating operations. Many solutions have been attempted but have met with limited success. Tanks are still overflowing! The best solution is to have a level warning on every tank of concern. This alarm must be durable and robust enough to withstand the plating environment. *And* it must be economical enough to install on every tank.

The T-PF-90 overflow alarm is just that: It uses all the same components that have proven to succeed in plating operations for over 15 years. It uses battery power so its easy to install.

- Loud alarm and bright flashing LED.
- Waterproof. Suitable for wash down duty.
- Easy installation - just screws in place.
- Durable - float guard protects the float switch.
- Battery powered so no electrical outlet required.
- Low battery alert.
- Compact - height is only 2 inches. [55mm]

MODEL T-PF-90

Stop tank overflows for good!
